SWATI MANOJ PANDEY

Data & AI Engineer

8130850139 pandeyswati53201@gmail.com LinkedIn

SUMMARY

AI Engineer with 3.5 years of experience in designing and deploying end-to-end ML & AI solutions. Skilled in Machine Learning, Deep Learning, and LLMs (Large Language Models) with expertise in Python, SQL, NLP, and Cloud Deployment. Proficient in building predictive models, scalable pipelines, and integrating ML/AI solutions into production. Passionate about applying LLM-powered AI for automation, insights, and decision-making.

EXPERIENCE

Software Engineer
Happiest Minds Technologies
08/2022 - 07/2025 | Noida, India

A technology company delivering advanced data-driven solutions and AI services.

- Built and maintained scalable ML pipelines in Python, reducing model training time by 30%.
- Developed APIs (Flask, Django REST) to integrate ML & DL models into applications serving 1000+ daily users.
- Implemented Deep Learning models (CNN, RNN, Transformers) for text and time-series analysis.
- Fine-tuned pre-trained LLMs (Hugging Face Transformers, OpenAI API) for NLP tasks, improving accuracy by 18%.
- Preprocessed and engineered features from large datasets (10M+ rows) using Pandas, NumPy, SQL.
- Deployed models on AWS & GCP using Docker, CI/CD pipelines.

Senior Software Engineer
Hcl Tech
11/2025 - Present | Nagpur, India

A technology company delivering advanced data-driven solutions and AI services.

- Working in the Pulse project team, delivering AI agent solutions for 1000+ enterprise agents across multiple customers.
- Designed and implemented AI agents using modern Agentic AI frameworks to automate customer workflows and enterprise tasks.
- Integrated LLMs and APIs to build conversational and task-oriented AI agents for enterprise applications.
- Deployed scalable agent services on Azure and AWS cloud infrastructure using containerized environments.
- Collaborated with cross-functional teams to design secure, scalable, and production-ready AI agent architectures.

PROJECTS

Data Integration & Insight Dashboard – The Brand Group (TBG)

Designed and implemented a robust data pipeline to clean and integrate large, unstructured CSV datasets. Applied exploratory data analysis and feature engineering using Jupyter Notebook and Pandas to uncover actionable insights. Built machine learning models for predictive analysis, helping the team make data-driven decisions. Automated ETL processes to streamline data preprocessing and improve model performance.

Sales Forecasting & Data Insights – Continental

Developed a machine learning solution to forecast profit, loss, and future sales trends by analyzing large historical datasets. Performed data cleaning, feature engineering, and regression modeling to enhance forecasting accuracy. Designed interactive dashboards to visualize trends and seasonal patterns, enabling the team to make informed, data-driven decisions for strategic planning.

Intelligent Invoice Processing Automation

Developed an AI-powered invoice processing system to automate extraction of key fields from PDF invoices. Analyzed 65+ invoice samples with varying layouts to identify structural patterns and build a robust extraction pipeline. Implemented document parsing and pattern recognition to handle multiple invoice formats and layout variations. Integrated LLM-based document understanding using AWS Bedrock and Azure LLM services to improve accuracy in field extraction. Deployed the solution on AWS cloud infrastructure, with experimentation and model validation performed using AWS SageMaker.

AI-Powered Resume Screening & Candidate Evaluation Agent

Built a GenAI-based resume screening agent to automate candidate evaluation against job requirements. Implemented skill-matching algorithms and scoring matrices to rank candidates based on experience, skills, and qualifications. Integrated LLM capabilities (AWS Bedrock / Azure OpenAI) to dynamically generate technical interview questions tailored to the candidate's skillset. The system streamlined recruiter workflows and improved candidate shortlisting efficiency through automated profile analysis and intelligent question generation.

Automated Email Notification & Workflow Agent

Developed an AI-driven notification and workflow automation agent to manage candidate communication during the recruitment process. Implemented rule-based and LLM-assisted workflows to trigger email notifications based on role assignments, evaluation status, and test completion. The system automatically forwards results and updates to the appropriate stakeholders, improving process transparency and communication efficiency. Deployed the agent services using AWS cloud infrastructure, integrating with enterprise systems and scalable event-driven workflows.

Date of Birth: 19 March 2000
Gender: Female
Location: Noida, India

LANGUAGES

English, Hindi

HOBBIES

Reading tech blogs
Playing badminton
Traveling

AWARDS

Awarded "Extra Miles Champion" award for exceptional ownership and delivery at **Happiest Minds** (2024)

SKILLS

Programming & Libraries: Python, Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Keras, Hugging Face Transformers

Databases: SQL, PostgreSQL,Vector Databases

Machine Learning: Regression, Classification, Clustering, Feature Engineering, Model Evaluation

Deep Learning & NLP:CNN, RNN, LSTM, Transformers, NLP, Text Processing, Hugging Face, Tokenization

GenAI & AI Agents:RAG (Retrieval Augmented Generation), AI Agents, LangChain, Agentic Workflows, Prompt Engineering, LLM Integration

LLM Platforms:OpenAI API, Azure OpenAI, AWS Bedrock

Deployment & Cloud: Flask, Django REST, FastAPI, Docker, AWS, Azure, AWS SageMaker

Visualization: Matplotlib, Seaborn, Power BI

Tools: Git, Jupyter Notebook, Linux,Google Colab

CERTIFICATION

- Python development Certification
- Deep Learning in Python Training Certification
- IBM Machine Learning -Coursera Certification

EDUCATION

Higher Secondary School
School of Scolar
Percentage : 70%
2016 - 2018 | Nagpur, India

Bachelor of Engineering
Priyadarshini College of Engineering
Aug 2018-July 2022
Percentage : 84%
Nagpur, India
